

Ford to offer over-the-air software updates across lineup

October 30 2019

This Feb. 15, 2018, photo shows a Ford logo on a 2018 Expedition 4x4 on display at the Pittsburgh Auto Show. Ford says that next year it will start equipping redesigned models to get software updates over the internet or cellular phone connections. The company says all of its models will get the feature as they are redesigned. It will reduce visits to dealers for service and even computer-related recall repairs. Owners will be able to opt in to the program and get updates over their home wireless network at no cost. The cost for cellular updates has not been announced. (AP Photo/Gene J. Puskar, File)

Beginning next year, Ford's redesigned vehicle models will allow software updates over the internet or through cellular phone connections.

The company says every model will be equipped with the technology as they are redesigned. The shift will reduce visits to dealers for service and even some computer-related recall repairs.

Once completed, Ford will join electric car maker Tesla Inc. in having over-the-air [software updates](#) across its model lineup.

Owners will be able to opt in to the program and get updates over their home wireless network at no cost. The cost for cellular updates has not been announced.

Ford Motor Co. said Wednesday that it will be able to update nearly all [vehicle](#) computer systems once the system is active.

The company wouldn't say which vehicle will get the feature first, but it intends to roll out an all-electric Mustang-inspired SUV next year.

Even vehicles with conventional gasoline engines will get the update feature.

"We can now help improve your vehicle's capability, quality and overall driving experience while you're sleeping," said Don Butler, Ford's [executive director](#) of connected vehicles and services.

The company says it will deliver its first updates about six months after launching the first vehicles with the feature next year. Some of the updates would be invisible to owners because Ford's system will run the existing software until the new version is verified and ready to run, the

[company](#) said.

Ford also announced that redesigned vehicles will get a faster and more capable version of its Sync infotainment system.
