

Harley-Davidson suspends production of electric motorcycle

October 15 2019

Harley-Davidson's LiveWire is pictured during its debut in June 2014 in New York

Harley-Davidson announced on Monday that it had suspended production and delivery of its LiveWire electric motorcycle, which the

brand had rolled out as part of a diversification push.

"We recently discovered a non-standard condition during a final quality check; stopped production and deliveries; and began additional testing," the company said in a statement.

The Wall Street Journal reported that the decision came after a problem with the vehicle's battery charging was discovered.

The manufacturer did not say when they planned to resume production.

Unveiled in 2014, the LiveWire sold for around \$30,000 in North America and Western Europe, according to the Harley-Davidson website.

The manufacturer, based in Milwaukee, Wisconsin in the United States, has turned to [electric vehicles](#) to attract younger riders as it grapples with an aging customer base and a lack of innovation in its range.

The company's sales were down more than six percent in the second quarter of this year.

Harley-Davidson's stock rose .31 percent on Monday at the close of markets.
