AT&T says it will stop advertising its wireless network as "5G Evolution" after a division of the Better Business Bureau determined that its language was misleading. The network AT&T branded this way is not, in fact, 5G—a new technology for fast wireless data.

While AT&T and other wireless carriers in the U.S. have now begun rolling true 5G wireless networks, AT&T in December 2018 began talking about a "5G Evolution" service that was already available in hundreds of markets, and placed a "5G E" icon on phones when they connected to the [network](#). But it was not 5G. It was merely the existing 4G network with minor speed boosts, at least compared to the fastest type of 5G networks.

Now, a division of the Better Business Bureau that regulates the ad industry has recommended that AT&T stop using "5G Evolution" and "5G Evolution, The First Step to 5G" claims in its marketing. Rival T-Mobile had brought a complaint about AT&T's language.

The panel found that this [language](#) "will mislead reasonable consumers into believing that AT&T is offering a 5G network."

AT&T said it disagreed with the group's reasoning but will comply with the decision. It's not clear what that means and how much AT&T uses the "5G Evolution" branding today in its stores and ads today. "5G Evolution" is on the [company's website](#), and AT&T phones carry a "5G

E" icon when you connect to the 4G network. AT&T spokeswoman Kate MacKinnon declined to comment on how AT&T uses the "5G Evolution" branding today or what would change.

AT&T has built out an actual 5G network since then, and says nationwide coverage will be available this summer. But it will be a while before most consumers actually notice, since so far only a handful of new phones are 5G-enabled.
