Russian-sponsored Twitter trolls, who so [aggressively exploited social](#)

[media](#) to influence the 2016 U.S. presidential election, didn't stop when Donald Trump was elected president.

Even after the election, they remained active and adapted their methods, including using images—among them, [easy-to-digest meme images](#) such as Hillary Clinton appearing to run away from police—to spread their views. As part of our study to understand how these trolls operate, we analyzed [1.8 million images posted on Twitter by 3,600 accounts](#) identified by Twitter itself as being part of Russian government-sponsored disinformation campaigns, from before the 2016 election through 2018, when those accounts were shut down by Twitter.

While our study focused on those specific accounts, it's reasonable to assume that others exist and are still active. Until they were blocked by Twitter, the accounts we studied were sharing images about events in Russia, Ukraine and the U.S. – including divisive political events like the "Unite the Right" rally in Charlottesville, Virginia, in August 2017. The images Russian government-backed trolls posted on Twitter appeared on other social networks, including Reddit, 4chan and Gab.

Internet trolls use images strategically

Tweets posted by Russian-sponsored Twitter accounts contained images more often in the lead-up to the 2017 Charlottesville right-wing rally than at any point in the previous three years.

Changing focus

What they posted shifted over time. We analyzed the actual images themselves, to identify the topics of the posts, and even depictions of public figures and specific locations. In 2014, most of these accounts began posting images related to Russia and Ukraine, but gradually transitioned to posting images about U.S. politics, including material about Donald Trump, Hillary Clinton and Barack Obama.

This is consistent with some of our [previous analysis of the text posts of these accounts](#), which showed they had changed their focus from Russian foreign policy to U.S. domestic issues.

Spreading their ideas, and others'

We found that the Russian-backed accounts were both creating new propaganda and amplifying messages created by others. About 30% of the images they tweeted had not appeared on other [social media](#) or elsewhere on Twitter and were therefore likely created by the Russians behind the accounts. The remaining 70% had appeared elsewhere.

By analyzing how their posts spread across different social networks

[over time](#), we were able to estimate how much influence these accounts had on the discussions on other [online services](#) like Reddit and Gab.

We found that the accounts' ability to spread political images varied by the social network. For instance, Russian-sponsored tweets about both parties were equally influential on Twitter, but on Gab their influence was mainly on spreading images of Democratic politicians. On Reddit, by contrast, the troll accounts were more influential at spreading images about Republican politicians.

Looking ahead

This research is an early step toward understanding how disinformation campaigns use [images](#). Our research provides a look at the past, but from what we have learned, we expect that information warriors will create more content themselves, and take advantage of material others create, to improve their strategies and effectiveness.

As the 2020 [presidential election](#) approaches, Americans should remain aware that Russians and others are still continuing their increasingly sophisticated efforts to mislead, confuse and spread social discord in the public.
