

Problem at US telecoms giant causes global internet outages

August 30 2020

Apps and websites including major streaming service Hulu, as well as the PlayStation network and Xbox Live platforms reported disruptions

A bug involving US-based telecoms giant CenturyLink briefly

interrupted internet service in several global markets Sunday, affecting popular streaming services, gaming platforms and webcasts of European soccer, the company and specialized media reported.

"We are able to confirm that all services impacted by today's IP outage have been restored..." the company said in a mid-morning Twitter post.

"We sincerely apologize for the impact this outage caused."

Contacted by AFP, the company provided no further details.

CenturyLink is based in Monroe, Louisiana. It was not immediately clear whether the disruption was related to damage from destructive Hurricane Laura, which passed through Louisiana late last week, causing widespread power outages.

Apps and websites including major streaming service Hulu, as well as the PlayStation network and Xbox Live platforms reported disruptions, CNN reported.

France's Telefoot soccer network was also affected, interrupting broadcasts of early-afternoon matches, sports journal L'Equipe reported. Telefoot had only recently resumed broadcasting soccer, after a pandemic-induced pause.

CloudFlare, a site designed to help keep other sites running during traffic spikes or malicious attacks, was itself affected.

CNN quoted John Graham-Cumming, CloudFlare's chief technology officer, as attributing the problem to CenturyLink.

CenturyLink suffered a massive outage in 2018 that affected ATM withdrawals, 911 calls and other services.
