

## GM 2020 profit drops, but it makes \$6.43B despite pandemic

February 10 2021, by Tom Krisher

This image provided by General Motors shows the new company logo. General Motors is changing its corporate logo and starting an electric vehicle marketing campaign as it tries to refurbish its image from a maker of gas-powered pickups and SUVs to a clean vehicle company. The 112-year-old Detroit automaker says, Friday, Jan. 8, 2021, the campaign will show GM's progressive company vision as it promises to roll out 30 new battery-powered vehicles globally by the end of 2025. General Motors' profit fell 4.5% in 2020, but a strong second half more than offset the effects of pandemic-related factory closures and a costly air bag recall.

The Detroit automaker said Wednesday it made \$6.43 billion as demand for its vehicles surged late in a year dominated by coronavirus upheaval. In the fourth quarter, the company made \$2.85 billion.

After GM's North American factories reopened in May, the company ran many of them flat-out but couldn't make up all the lost production. As customers returned to buying again, inventory was short and GM's U.S. sales for the year fell 12% from 2019. But because buyers bought more expensive trucks and SUVs and loaded them with options, the company was able to turn a big profit.

Excluding one-time items, GM earned \$4.90 per share in 2021, beating Wall Street estimates of \$4.40. Revenue for the year was \$122.49 billion, which also passed estimates of \$120.83 billion, according to FactSet.

For the fourth quarter, the company earned \$1.93 per share, also ahead of analyst expectations of \$1.60. Revenue was \$37.52 billion, surpassing estimates of \$36.18 billion.

But there are new challenges ahead. The company predicted that a global shortage of semiconductor chips will cost it \$1.5 billion to \$2 billion before taxes this year due to lost production. Still, GM expects pretax income for the year of \$10 billion to \$11 billion, or \$4.50 to \$5.25 per share.

The shortage has forced GM to cancel shifts at several factories, but CEO Mary Barra said it won't affect GM's most profitable vehicles that are in high demand. She expects the <u>chip shortage</u>, which is hitting the entire auto industry, to be resolved this year, but it was too early to predict precisely.

"We're doing everything possible," Barra said. "We won't lose any production throughout the year as it relates to full-size trucks and SUVs."

GM could build vehicles without chips and install them when the parts become available, she said.

Also Wednesday, the company released more details about its <u>aggressive</u> <u>push into electric vehicles</u>.

GM already has pledged to spend \$27 billion developing 30 new global electric vehicles and on autonomous vehicle research by 2025, with two-thirds of the EVs coming to the U.S. The company said Wednesday it would spend more than \$7 billion on electric and self-driving vehicles in 2021 alone.

After rising over 33% this year, GM shares fell 3.6% to \$54.05 Wednesday.

CFRA Analyst Garrett Nelson, who has a "hold" rating on GM stock, wrote in a note to investors about the near-term risk of the chip shortage. He also sees "significant operational and profitability related risks" from the company's planned transition to all-electric light vehicles in the coming years.

GM has set a goal of making all light vehicles it sells run on batteries by 2035.

Barra said in a letter to investors that a mix of pickup trucks and SUVs helped the company to its largest U.S. market share gain since 1990. The U.S. is by far GM's most lucrative market. The company ended last year with 17.1% of U.S. new vehicle sales, up 0.6 percentage points from 2019.

In North America, GM's primary profit center, the company made just over \$9 billion before taxes last year. That means about 44,000 members of the United Auto Workers union will get profit sharing checks of around \$9,000 later this month.

The fourth-quarter and full-year results took a \$1.1 billion hit from a gigantic recall involving 7 million big pickup trucks and SUVs worldwide with dangerous air bag inflators made by Takata.

In November, the U.S. National Highway Traffic Safety Administration denied GM's attempts to avoid the recall, and the company said it would comply. The automaker had petitioned the agency four times since 2016 to avoid recalls, contending the air bag inflator canisters have been safe on the road and in testing. But the agency said the inflators still run the risk of exploding.

Takata used the volatile chemical ammonium nitrate to create a small explosion and inflate the air bags in a crash. But the chemical can deteriorate when exposed to heat and humidity and explode with too much force, blowing apart a metal canister and hurling shrapnel into drivers and passengers.

The problems caused the largest string of vehicle recalls in U.S. history involving 19 automakers. At least 27 people have been killed worldwide.
