

Boeing sees full commercial air recovery by 2024

September 14 2021

Boeing lifted its projection for aerospace market over the next decade, predicting a full commercial recovery by 2024.

Boeing said Tuesday that the commercial aviation market should fully recover by 2024 from its pandemic slump, as the industry giant lifted its

aerospace forecast for the next decade.

Boeing projected a \$9 trillion aerospace market over the next decade, up from the \$8.5 trillion outlook a year ago, according to its annual market outlook report.

"As our industry recovers and continues to adapt to meet new global needs, we remain confident in long-term growth for aerospace," said Boeing Chief Strategy Officer Marc Allen.

"We are encouraged by the fact that scientists have delivered vaccines more rapidly than imaginable and that passengers are demonstrating strong confidence in [airplane travel](#)."

Compared with last fall's projection, Boeing now sees increased orders for commercial planes and aviation services over the [next decade](#), and the same level of demand for defense and space as previously forecast.

"We've lost about two years of growth," Darren Hulst, [vice president](#) for commercial marketing at Boeing, said in a media briefing. "However, we see a recovery to pre-virus levels by the end of 2023 or early 2024."

Looking further out, Boeing said the 20-year growth outlook "remains intact," with [passenger travel](#) averaging four percent annual growth, above the 2.7 percent in global economic growth expected over this period.

Thus far, domestic travel has recovered much more quickly than international travel, reflecting a discrepancy in [travel restrictions](#).

About 84 percent of domestic travel returned to 2019 levels in July, compared with only about one-fourth of international travel, according to a Boeing presentation.

Boeing expects demand for 32,500 new single-aisle planes through 2040, about the same level as the pre-pandemic forecast. The company projected 7,500 new widebody jets over the period, down eight percent from the 2019 outlook.

One of the hottest areas of growth centers on planes that carry freight, including converted planes. Boeing projected the 2040 fleet of global freighters would rise 70 percent from the pre-pandemic level, reflecting soaring demand connected to e-commerce.
