

From crypto to COVID: Why auction prices are rocketing

November 25 2021, by Hugues Honore and Eric Randolph

"Big John", the largest known triceratops, over 66 million years old and with an 8-metre long skeleton, fetched 6.6 million euros at auction in Paris last month.

From Albert Einstein's notes to a record-breaking Frida Kahlo to a 6.6-million-euro triceratops—auction houses have lately seen a string of

record-breaking items going under the hammer and through the roof.

Valuations are becoming hard to judge.

On Wednesday, the Einstein manuscript went for 11.3 million euros (\$13 million) in Paris, five times its expected price.

That came just days after a storyboard for the failed 1970s film version of "Dune" sparked a bidding war that pushed the price 100 times above the valuation to 2.7 million euros.

Market watcher Artprice credits a transition to online sales for sparking new levels of interest, particularly in the US and Asia.

"The auction houses were very behind the times. But COVID forced them to modernise and the result is that [online sales](#) have been spectacular and have attracted a new audience," said Artprice founder Thierry Ehrmann.

Many dynamics are changing, he said, giving the example of 30-somethings who prefer to collect art than buy their first home.

'Spectacular'

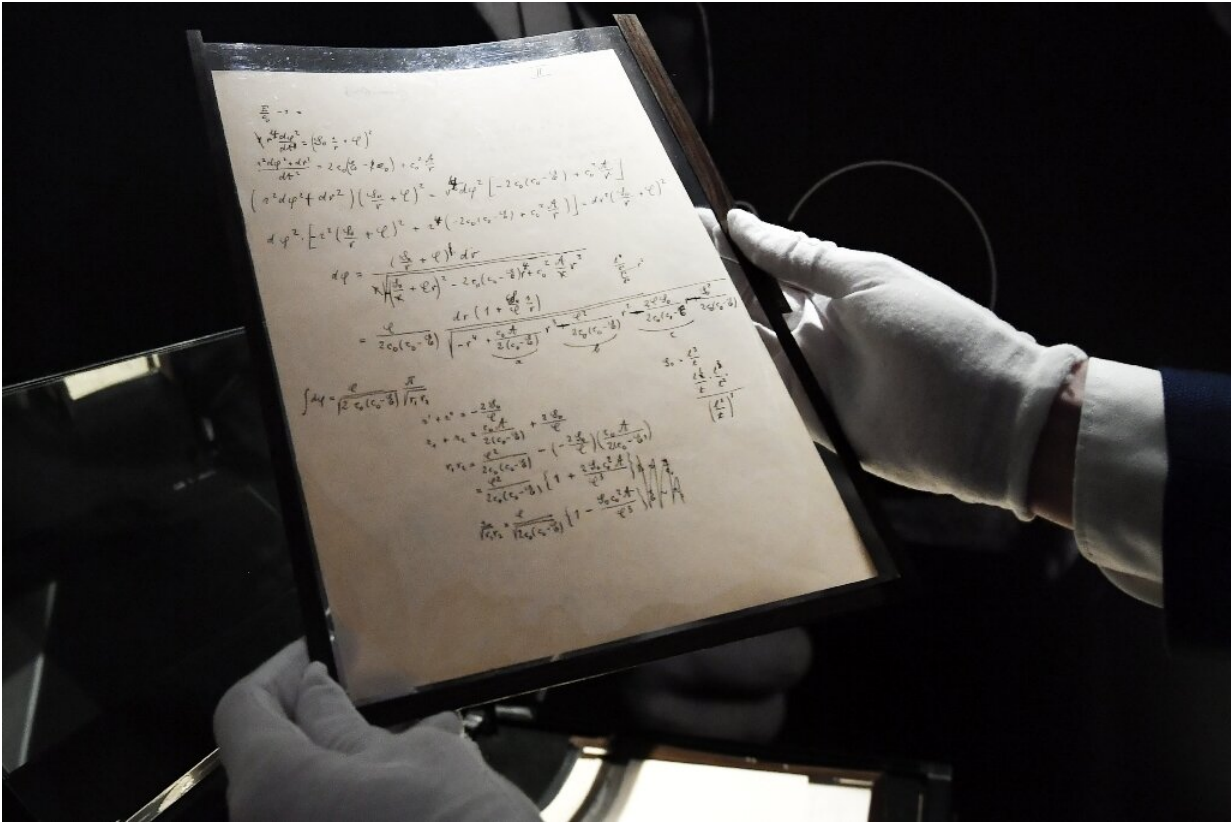

After an initial freeze as the pandemic took hold in 2020, online auctions exploded later in the year as millions hunted for new ways to kill time and spend money during lockdowns.

With stock markets soaring in the pandemic, the rich got significantly richer, while struggling to find ways to spend it.

This has helped push the old masters to new heights.

This month alone in New York, a Van Gogh went for \$71.3 million and a Kahlo self-portrait set a new record for the Mexican artist's work at nearly \$35 million.

But it has also created a hunger for almost anything collectable, from Michael Jordan sneakers (\$1.5 million), to an original copy of the US Constitution (\$43 million) to an 800,000-euro bottle of Burgundy wine.

This Einstein manuscript fetched five times its expected price at Christie's in Paris on Wednesday—but as its author might have said, it's all relative.

"At a time when many art fairs can't happen in person and online viewing rooms are awful, auctions have become a predominant form of

selling," Anna Brady, art markets reporter for The Arts Newspaper, said on its podcast.

Brady highlighted the infusion of cash from a new source: crypto-millionaires.

They have expanded from an initial focus on digital art—such as the mind-boggling \$69 million paid for a JPG file by one of its pioneers, Beeple, in March—into more traditional tastes.

Crypto "whale" Justin Sun has bought works by Picasso and Andy Warhol this year, and paid \$78.4 million for Alberto Giacometti's "The Nose" sculpture this month.

Sun then triggered a lot of harrumphing among stuffed shirts of the art world by boasting about his purchase on Twitter—breaching their traditional codes of secrecy and discretion in a way that suggests an even more [competitive market](#) to come.

'Become natural'

Is it all a bubble?

It's a question that's been raised before, especially in the 1980s when the art [market](#) looked in danger of overheating under the pressure of a new generation of yuppies trying to flash their cash.

But despite several cooling-off periods—including the 2008 financial crash and a sharp drop between 2015 and 2019—the overall trend has been skyward.

Artprice says the contemporary art market has grown from \$103 million in 2000 to \$2.7 billion today.

"Buying and re-selling has become much more natural: to refine one's collection, or following a divorce, or because our tastes have changed," said Ehrmann.

Deloitte estimated in 2020 that the uber-rich own \$1.45 trillion of art and collectables.

For these people, said Ehrmann, "there's no longer a psychological barrier to paying more than a million dollars for something online."
