

Facebook listened to users' conversations: report

14 August 2019

Facebook recently paid a record \$5 billion fine to US trade regulators

Facebook has paid hundreds of contractors to listen to and transcribe snippets of users' conversations, US media reported on Tuesday, amid heightened scrutiny of the social network's data collection practices.

Facebook acknowledged the transcriptions, which were first reported by Bloomberg, telling the news agency in a statement that they were made with users' permission, but that the practice has nonetheless been stopped.

"Much like Apple and Google, we paused human review of audio more than a week ago," the company said.

Facebook did not respond to a request for comment from AFP.

The contractors were testing the ability of the social network's [artificial intelligence](#) to interpret messages, and the only users affected were those on Facebook Messenger app who had opted to have their [voice](#) chats transcribed.

Bloomberg said the contractors working on the project were "rattled" by listening to private audio whose origin wasn't disclosed and which sometimes contained [vulgar content](#).

The contractors also weren't told the reason why they were doing the transcribing, the [news agency](#) reported.

Amazon, Apple and Google—all companies offering voice assistants—have previously acknowledged collecting conversations for the purpose of improving their products.

Apple and Google have in recent weeks said they've halted the practice, while Amazon gives users the option of blocking the collection of their voice by Alexa, the artificial intelligence driving their Echo voice assistant.

Facebook, which just settled a record \$5 billion fine with the US Federal Trade Commission for misusing users' private data, has given differing responses to reports that it uses audio recordings to better target ads or make its pages more attractive.

"You're talking about this conspiracy theory that gets passed around that we listen to what's going on on your microphone and use that for ads," Facebook CEO Mark Zuckerberg said in US Senate testimony last year.

"We don't do that," he said.

But the company later told lawmakers in writing that it does actually collect conversations if users have specifically allowed it to do so and are using certain audio features.

The company didn't specify what it did with the audio afterwards.
