Samsung's new phones test consumer demand for pricey gadgets
5 August 2020, by Michael Liedtke

Samsung aims to lift its sinking smartphone sales with three new models that will test consumer willingness to buy high-priced gadgets during the worst economic downturn since the Great Depression. The company’s latest Galaxy phones, unveiled Wednesday, Aug. 5, 2020, during an online showcase, will cost $1,000 to $1,300. (Samsung via AP)

"We know these are challenging times, and people are depending on technology more than ever," said TM Roh, president of Samsung’s mobile communications arm. He joked that the new phones will help people "play harder when maybe they should be working harder," a reference to the millions of people now doing their jobs at home.

Apple is enjoying success with a $399 iPhone released in April. Google is also rolling out a $349 Pixel phone that has many of the same features as its more expensive model. Such phones are intended for buyers who are strapped for cash or unwilling to pay for pricey phones that don’t offer big advances over their predecessors.

Samsung also gave a glimpse of its second attempt at a phone with a foldable screen, but said it won’t have details on pricing and availability until Sept. 1. That phone, called the Z Fold2, is expected to cost in the range of $1,500 to $2,000, based on the price for last year’s first-generation model.

Samsung is already struggling with an unsettling downturn. Its smartphone shipments plunged 29% from last year in the April-June quarter, according to the research firm International Data Corp. That drop helped China’s Huawei at least temporarily surpass Samsung as the world’s top seller of smartphones while Apple remained in third place—although the cheaper iPhone SE did boost Apple’s market share, IDC said.

The latest Galaxy phones unveiled Wednesday, Aug. 5, during an online showcase will cost $1,000 to $1,300.

Like other phone manufacturers, Samsung is hoping that a transition to new ultrafast “5G” wireless networks will drive demand for new phones; its latest models are 5G-compatible. In other respects, however, smartphone innovation has largely stalled, a trend that predated the pandemic shock.

The upcoming foldable phone, meanwhile, is something of a do-over for Samsung. The Z Fold2 has a front display screen so it can be carried around like a phone with an interior screen that can be opened up so it can be used like a mini-tablet, depending on what a user needs at the time.

But Samsung’s first foldable phone last year turned out to be a flop, partly because it proved fragile even after the company delayed its release by several months in an effort to deal with the problem.

Samsung is promises that the Z Fold2 will far more durable because it will have ultra-thin glass and tougher hinges for unfolding the device.
