Graphics chip maker Nvidia said Monday it plans to build Britain's fastest supercomputer that healthcare researchers can use to work on medical problems including COVID-19.

Nvidia, based in Santa Clara, California, said it will spend 40 million pounds (\$52 million) on the supercomputer, dubbed Cambridge-1, which will consist of 80 Nvidia systems and is expected to be online by the end of the year.

Nvidia CEO Jensen Huang said Cambridge-1 will be available to healthcare researchers using [artificial intelligence](#) to working on urgent medical

challenges.

"Tackling the world's most pressing challenges in healthcare requires massively powerful computing resources to harness the capabilities of AI," Huang said.

Cambridge-1 would be ranked the world's 29th most powerful supercomputer and the most powerful in the U.K., [the company said](#).

Pharmaceutical companies GlaxoSmithKline and AstraZeneca are among the groups that have already signed up to use the supercomputer.

The announcement comes after the [company](#) said [last month](#) it agreed to buy U.K.-based chip designer Arm Holdings for up to \$40 billion, and would set up an artificial intelligence research center in Cambridge, England, where Arm is headquartered.
