

# Music world taps 'NFT' digital goldrush

March 15 2021, by Philippe Grelard and Eric Randolph

Kings of Leon raised more than \$2 million by auctioning off NFT versions of their new album

"NFT" is quickly becoming the acronym of 2021, offering a new way to sell digital art online, and music stars including Kings of Leon and Grimes have been quick to jump on the bandwagon.

For many, it remains a baffling concept, but a NFT ("non-fungible token"—pronounced "nifty") essentially offers collectors proof that they "own" a digital artwork by logging that ownership on the blockchain, the online database that underpins cryptocurrencies such as Bitcoin.

In no time, it has taken the art world by storm. Just last week, a collage by digital [artist](#) Beeple was sold at auction for \$69.3 million, reportedly the third highest-ever sale for a living artist in any medium.

Many see an opportunity to monetise [digital art](#) of all kinds, offering wealthy collectors the bragging rights to ultimate ownership, even if the work can be endlessly copied. For investors, it's also a new commodity to be traded.

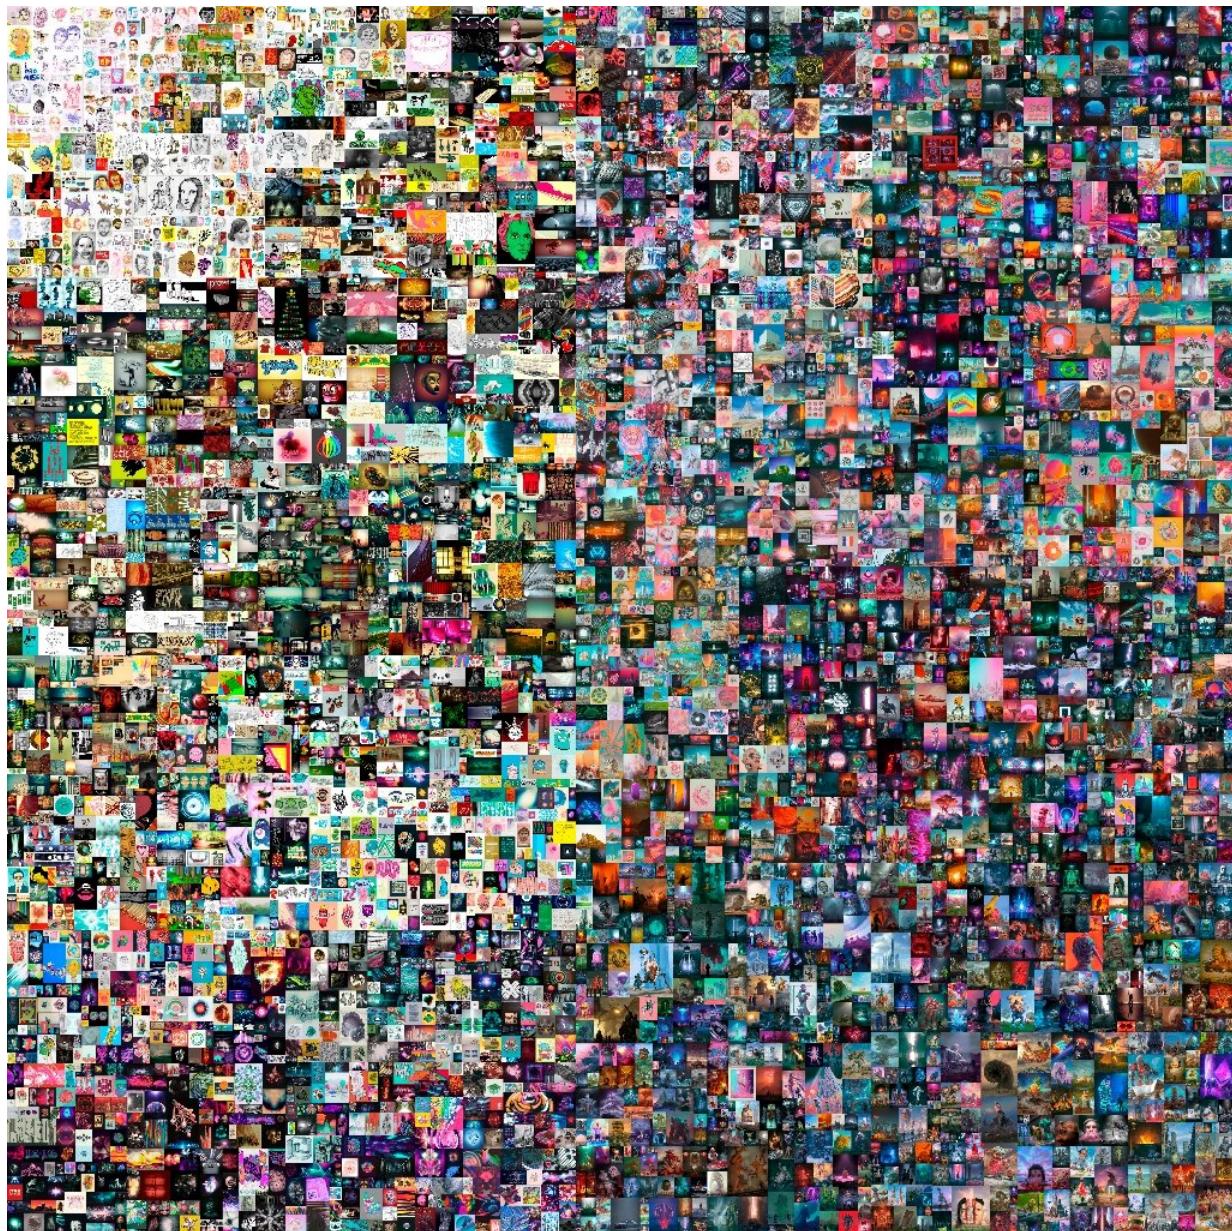

In the [music world](#)—an industry which has seen its value shredded by digitisation over the past 20 years—NFTs offer hope of a valuable new revenue stream.

Earlier this month, US rockers Kings of Leon raised more than \$2 million by auctioning off NFT versions of their new album "When you see yourself", according to Rolling Stone magazine, of which a quarter went to a solidarity fund for live event workers.

Their NFTs offered more than just the abstract notion of owning something rare. They came with tangible benefits: access to photos by band member Matthew Followill, collector's editions of the vinyl, and at the top end, a lifetime "golden ticket" to front-row seats at their live shows.

## Gold rush

Josh Katz, CEO of YellowHeart, the NFT auction platform used by Kings of Leon, claimed it was "ushering in the new music era".

Going under the hammer at \$69.3 million, this digital collage by Beeple was reportedly the third highest-ever sale for a living artist

"Through the use of NFTs and blockchain technology, we'll begin to see the industry start to move toward a more decentralised model that fosters

symbiotic relationships between music lovers and artists," he told AFP.

"Artists will monetise their content again and fans will have transparency when buying both content and concert tickets."

Several stars are already tapping the opportunity.

Mike Shinoda, of US rap-metal group Linkin Park, recently sold an NFT version of a single which came with an animated visual created by artist Cain Caser.

Canadian singer Grimes, who has always had a strongly visual component to match the futuristic, dystopian vibes of her music, recently sold an audiovisual collection as NFTs for some \$6 million.

Not everyone is entirely convinced, however.

"If this technology is put to the service of artists, that's great. But if we aren't very careful, they risk being stripped of their copyright," said Emily Gonneau, French author of a book on music in the digital age.

"Anyone can sample anything off the internet and claim to be the creator of an NFT... Then we're on a [gold rush](#) where anything is possible," she said.

## 'Democratised'

Indeed, several digital artists, including one who goes by the name Weird Undead, have already found their work being ripped off and sold on NFT platforms, according to online magazine Decrypt.

The anonymous, decentralised nature of the blockchain makes it hard to counter these copyright infringements.

But the flipside, argues blockchain investment consultant Eloisa Marchesoni, is that NFTs make it much easier to verify items issued by the real artists, since each artwork, concert ticket or collectible has its own digital signature logged on the blockchain that cannot be falsified.

The best opportunity for artists, she said, is the ability to sell add-ons that boost their income.

"You can grant access to a whole variety of perks," she told AFP.

"Let's say you buy a rare shoe from an artist. The NFT guarantees its authenticity, but also grants you access to a contest where you can win some special experience with the artist."

"It's no different from the traditional art market: people with spare time and capital looking for that sense of exclusivity," Marchesoni added.

"But now it's being democratised—anyone can easily go online and buy

an NFT."
